THIS REPORT IS BY NO MEANS A LEGAL ADVICE AND THEREFORE YOU SHOULD SEEK LEGAL ADVICE BEFORE TAKING ANY FURTHER ACTION**

## Executive Summary

The security posture of XXXXX has been assessed on XXXX 2022. Based on the audit collateral provided, interviews and observations, the level of information security assurance to protect corporate and customer data is considered to be **'Moderate'**.

Several domains, including Compliance, are well managed and the controls were effective. The security controls in the domains of Network Security, Business Continuity and Disaster Recovery (Resilience) and Supplier Security were ineffective and improvements to manage the risks are recommended.

Based on the IISRI® rating scale (in the appendix), the overall information security rating of XXXXX is:

## 1. Assessed domains and results

| Domain                              | Rating | Justification  |
|-------------------------------------|--------|--|
| <b>Compliance</b>                   | A      | <ul style="list-style-type: none"> <li>XXXXX complies with local regulations (including NZ Privacy Act 2020) as well as with ISO27001.</li> <li>The performed audit on the effectiveness of controls is limited to a subset of the Annex controls of the standard.</li> </ul>  |
| <b>Risk management</b>              | BBB    | <ul style="list-style-type: none"> <li>Risk management practice is in place and a risk register is maintained.</li> <li>XXX some very high- level risks have not been acted on for a long period of time.</li> <li>Assessing security risks in projects is done in an inconsistent way and not according to XXX's risk management framework.</li> </ul>  |
| <b>Human resources</b>              | B      | <ul style="list-style-type: none"> <li>Background checks and credit checks are performed for permanent staff; not for contractors.</li> <li>There is no additional vetting process for critical staff members, such as a Ministry of Justice criminal check.</li> <li>The HR policy hasn't been reviewed since 2019.</li> <li>Security and privacy awareness training is done ad hoc and not for all staff.</li> </ul> |
| <b>Security testing</b>             | CCC    | <ul style="list-style-type: none"> <li>Penetration testing is conducted once a year, but it is limited to XXX web portals.</li> <li>Vulnerability scanning is performed monthly, but it also doesn't cover XXXXX internal servers and corporate network.</li> </ul>  |
| <b>Endpoint security</b>            | BB     | <ul style="list-style-type: none"> <li>All endpoints have anti-malware software installed.</li> <li>Bitlocker is only on some devices enabled.</li> <li>Ports on the endpoints are not disabled, allowing staff to use flash drives and transfer files unauthorised.</li> </ul>  |
| <b>Network security</b>             | CC     | <ul style="list-style-type: none"> <li>A Web Application Firewall is used but in passive mode and not actively monitored.</li> <li>There are no DLP solutions in place, allowing confidential information to leave the organisation.</li> <li>IDS/IPS systems are turned on, but only on the ingress/egress firewalls.</li> <li>DDOS protection is in place, but limited to protocol based DDOS attacks.</li> </ul>    |
| <b>Access management</b>            | C      | <ul style="list-style-type: none"> <li>There is no defined provisioning and deprovisioning process.</li> <li>Accounts of former employees have still not been removed from some systems.</li> <li>User access reviews are performed (error-prone) manually, ad hoc and are limited to XXX systems.</li> </ul>  |
| <b>Resilience</b>                   | C      | <ul style="list-style-type: none"> <li>XXXXX are not resilient to major interruptions: the implemented redundancy mechanism for XXXX sites have not functioned properly during lockdowns.</li> <li>BCP has not been tested for the XXX site and backup recovery tests were not performed since 2020.</li> </ul>  |
| <b>Supplier security</b>            | C      | <ul style="list-style-type: none"> <li>There is no requirement or process to assess suppliers before engaging with them.</li> <li>There is no periodic review performed on existing suppliers.</li> </ul>  |
| <b>Security incident management</b> | AA     | <ul style="list-style-type: none"> <li>Logging of all servers is turned on</li> <li>There is a SIEM solution in place to centrally monitor security events.</li> <li>There is a practice but not a defined process to manage security incidents effectively.</li> </ul>  |
| <b>Asset management</b>             | CC     | <ul style="list-style-type: none"> <li>Various spreadsheets are used with different owners.</li> <li>Not all assets are recorded in the asset register</li> <li>There is a classification standard, but assets are not classified.</li> </ul>  |

## 2. Recommendations

| Domain                       | Rating | Recommendations |
|------------------------------|--------|-----------------|
| Compliance                   | A      |                 |
| Risk management              | BBB    |                 |
| Human resources              | B      |                 |
| Security testing             | CCC    |                 |
| Endpoint security            | BB     |                 |
| Network security             | CC     |                 |
| Access management            | C      |                 |
| Resilience                   | C      |                 |
| Supplier security            | C      |                 |
| Security incident management | AA     |                 |
| Asset management             | CC     |                 |

## Appendix A. IISRI® Internal Rating Scale

| Rating | Meaning  | Mark              | Risk            |
|--------|--|-------------------|-----------------|
| AAA    | All information security and privacy controls are adequate, appropriate, and effective enough to provide reasonable assurance that security and privacy risks are being managed and objectives are met.  | Excellent         | None to minimal |
| AA     | Almost all information security and privacy controls are adequate, appropriate, and effective enough to provide reasonable assurance that security and privacy risks are being managed and objectives are met.   | Very good         | Very low        |
| A      | Almost all information security and privacy controls are adequate, appropriate, and effective enough to provide reasonable assurance that security and privacy risks are being managed and objectives are met. A few specific control weaknesses have been noted. Minor additional work on information security or privacy is recommended. | Good              | Low             |
| BBB    | Main information security and privacy controls are adequate, appropriate, and effective enough to provide reasonable assurance that security and privacy risks are being managed and objectives are met. A few specific control weaknesses have been noted. Minor additional work on information security or privacy is recommended.       | Satisfactory      | Low             |
| BB     | Main information security and privacy controls are adequate, appropriate, and effective enough to provide reasonable assurance that security and privacy risks are being managed and objectives are met. Some specific control weaknesses have been noted. Moderate additional work on information security or privacy is recommended.     | Sufficient        | Moderate        |
| B      | Some information security and privacy controls are adequate, appropriate, and effective enough to provide reasonable assurance that security and privacy risks are being managed and objectives are met. Many specific control weaknesses have been noted. Major additional work on information security or privacy is highly recommended. | Moderate          | Moderate        |
| CCC    | Main information security and privacy controls are unlikely to provide reasonable assurance that security and privacy risks are being managed and objectives are met. Major work on information security or privacy is highly recommended.   | Insufficient      | High            |
| CC     | Almost all information security and privacy controls are unlikely to provide reasonable assurance that security and privacy risks are being managed and objectives are met. Major work on information security or privacy is highly recommended.   | Very insufficient | High            |
| C      | Almost all information security and privacy controls are unlikely to provide reasonable assurance that security and privacy risks are being managed and objectives are met. Major work or complete new program on information security or privacy is required.   | Poor              | Very high       |
| D      | All information security and privacy controls are not providing any assurance that security and privacy risks are being managed and objectives are met. Complete new program on information security and privacy is required.  | Very poor         | Almost certain  |

The rating represents the level of information security or privacy assurance of an assessed organisation at a specific moment in time. **The risk score is given under the assumption of an imminent threat and significant impact on the (service of the) organisation.**

## Appendix B. IISRI® domains mapped to security standards

| Domain                       | ISO27001 | NZISM | NIST CSF |
|------------------------------|----------|-------|----------|
| Compliance                   |          |       |          |
| Risk management              |          |       |          |
| Human resources              |          |       |          |
| Security testing             |          |       |          |
| Endpoint security            |          |       |          |
| Network security             |          |       |          |
| Access management            |          |       |          |
| Resilience                   |          |       |          |
| Supplier security            |          |       |          |
| Security incident management |          |       |          |
| Asset management             |          |       |          |
